

Luxury Touch Massage - User Manual

Welcome to the **Luxury Touch Massage** management system! This manual will guide you, the Business Owner, on how to manage day-to-day operations using your Admin Dashboard App and explain how your customers interact with the Booking Website.

1. Introduction

Your system consists of two main parts:

1. **The Booking Website:** A public-facing website where your customers can view your services, prices, and book appointments.
 2. **The Admin Dashboard App:** A private mobile application installed on your phone. This is your command center where you receive new bookings, approve them, and update your business details (like services offered and contact info).
-

2. The Booking Website (Customer View)

When customers visit your website, they will see:

- Your business name, tagline, and a beautiful hero image.
- A list of **Services** and **Optional Add-ons** along with descriptions, duration, and pricing.
- A **Booking Form** where they can select a service, pick a date & time, and provide their contact details.

Note: The information displayed on this website is entirely controlled by you. You can update the services, prices, and contact information directly from your **Admin Dashboard App** (see the *Settings Tab* section below).

3. The Admin Dashboard App

The core of your daily operations happens within the Admin App. It is divided into three main tabs at the bottom of the screen: **Requests**, **Approved**, and **Settings**.

3.1 Managing New Bookings (Requests Tab)

When a customer submits a booking from the website, it instantly appears in your **Requests** tab.

How to Approve or Reschedule a Booking:

1. Open the **Requests** tab (the first icon at the bottom).
2. Tap on any New Request card to view the full details (Customer Name, Service, Requested Date & Time, Email, Phone, and Special Notes).
3. A menu will slide up giving you two options: **Reschedule** or **Approve**.
4. **To Approve:** Tap the green **Approve** button. You will be asked to confirm the service location. Once confirmed, the booking moves to the *Approved* tab.

5. **To Reschedule:** Tap the **Reschedule** button. Choose a new date, time, and write a small note to the customer. Once sent, the status updates to rescheduled.

3.2 Viewing & Exporting Bookings (Approved Tab)

The **Approved** tab stores all upcoming and confirmed appointments.

Features of the Approved Tab:

- **View Schedule:** Quickly see your confirmed client list, what service they booked, and exactly when they are scheduled.
- **Download CSV:** If you need to export this list to your computer, accounting software, or print it out, tap the prominent **Download CSV** button at the top. This will save a spreadsheet file to your device's Downloads folder.

3.3 Site Settings & Service Management (Settings Tab)

The **Settings** tab acts as your remote control for the public Booking Website. *Any changes you make here will instantly update the website for your customers.*

What you can manage:

- **Services Management:** Add entirely new massage services, update prices, change descriptions, or edit the durations offered.
- **Add-ons:** Within each service, you can create optional add-ons (like "Hot Stones" or "Aromatherapy") with their own extra price and time requirements.
- **Business Profile:** Edit your Business Name and Tagline.
- **Contact Info:** Update the Phone Number, Business Email, and Address which display at the bottom of your website.

How to Edit:

1. Navigate to the **Settings** tab (the gear icon).
2. Find the item you want to change (e.g., *Services Management*).
3. Tap the **Pencil Icon** next to it.
4. Type in your changes in the pop-up box and tap **Update** or **Save Service**. The changes are pushed to the live website immediately!

Need Help?

If you encounter any technical issues with the app, such as a white screen or bookings not loading, please ensure your device has an active internet connection. If the issue persists, consult the [DEVELOPER_GUIDE.md](#) or contact your technical support provider for assistance.
